Verify that report processing is complete

Learn how to use the Reports API to verify that report processing is complete.

Learn how to use the Reports API to verify that report processing is complete.

Prerequisites

To complete these tutorials, you need:

- Authorization from the selling partner for whom you are making calls. For more information, refer to [Authorizing Selling Partner API applications](#).
- One of the required [roles](#) for the Reports API assigned to your developer profile.
- One of the required [roles](#) for the Reports API selected in the app registration page for your application.

Verify that report processing is complete

After you call the `createReport` operation, Amazon receives the request and begins processing the report. You must then confirm that processing has completed before you continue.

Periodically call the `getReport` operation, passing the `reportId` value from the previous step, until the `processingStatus` value in the response indicates that processing has ended. Processing will have ended when the `processingStatus` equals `CANCELLED` , `DONE` or `FATAL` . At this point the

Verify that report processing is complete

response includes a `reportDocumentId` value if there is report data available.

Here are the `processingStatus` values that confirm that processing has ended:

- **CANCELLED** - The report was cancelled. There are two ways a report can be cancelled: an explicit cancellation request before the report starts processing, or an automatic cancellation if there is no data to return.
- **DONE** - The report has completed processing and a `reportDocumentId` is available.
- **FATAL** - The report was stopped due to a fatal error and a `reportDocumentId` might be present. If present, the report represented by the `reportDocumentId` can explain why the report processing ended.

The following `processingStatus` values indicate that processing has *not* ended, and you should continue to call the `getReport` operation until the operation returns a `processingStatus` of **CANCELLED**, **DONE** or **FATAL**.

- **IN_PROGRESS** - The report is being processed.
- **IN_QUEUE** - The report has not yet started processing. It might be waiting for another **IN_PROGRESS** report.

Note: The `getReport` operation only serves information for on-demand or scheduled report requests that were created within the last 90 days.

Path parameter:

Name	Description	Required
<code>reportId</code>	The identifier for the report. This identifier is unique only in combination with a seller ID. Type: string	Yes

The following example contains the `getReport` operation request:

HTTP

GET https://sellingpartnerapi-na.amazon.com/reports/2021-06-30/reports/ID323

Response

A successful response includes the following:

Name	Description	Schema
payload	The payload for the getReport operation.	Report

The following example contains the `getReport` operation response:

JSON

```
{  "payload": {    "reportId": "ID323",    "reportType": "GET_MERCHANT_LISTINGS_ALL_DATA",    "dataStartTime": "2019-12-11T13:47:20.677Z",    "dataEndTime": "2019-12-12T13:47:20.677Z",    "createdTime": "2019-12-10T13:47:20.677Z",    "processingStatus": "DONE",    "processingStartTime": "2019-12-10T13:47:20.677Z",    "processingEndTime": "2019-12-12T13:47:20.677Z",    "reportDocumentId": "DOC-b8b0-4226-b4b9-0ee058ea5760"  }}
```
