# What is the Selling Partner API?

This topic describes the REST-based Selling Partner API.

The Selling Partner API (SP-API) is a REST-based API that helps sellers and vendors access their data on orders, shipments, payments, inventory, and other business information. The API supports building applications that automate Amazon business operations.

## Key features

With SP-API, developers can create applications that help sellers and vendors:

- Process orders automatically, send instant shipping confirmations, and update tracking information in real-time.

Learn How Sellers Authorize Service Providers

Selling Partner API Roles >

- Access real-time order status, inventory levels across warehouses, and payment reports.

- Set up automated workflows to create a new listing, sync inventory across multiple marketplaces, update pricing based on market conditions, and manage fulfillment operations.

- Subscribe to notifications to receive alerts when orders are placed, updates about shipping status changes, and updates about traffic metrics for products listed on Amazon.

- Automate the retrieval of financial transactions, tax information, and invoices.

## Global application registration and secure authorization

With SP-API, developers register once in their preferred

region and marketplace. After registering, selling partners can initiate an OAuth authorization workflow from the [Selling Partner Appstore](#) detail page or from a developer website from any region or marketplace. OAuth authorization provides secure access to data with permissions.

## Developer tools

SP-API includes:

- Tools to generate [SDKs](#) that provide access to all SP-API endpoints with built-in LWA token exchange and authentication.
- A [sandbox](#) environment for select SP-APIs to test applications before production deployment.
- A [Data Kiosk API](#) to obtain seller sales and traffic data. A [Data Kiosk Schema Explorer](#) is also available to help build custom queries for the Data Kiosk API.
